PROFILE

Cyber Security student at ISBAT University with developing practical skills in IT support, networking, Linux administration, and introductory security testing. Has used Kali Linux, Nmap, Wireshark, Burp Suite, TheHarvester, and GitHub in coursework and project-based learning. Familiar with documenting technical procedures, basic service discovery, HTTP-header review, Linux permissions, and network troubleshooting. Seeking an entry-level IT Support or Network Security opportunity to apply foundational technical knowledge, support users, troubleshoot issues, and continue building professional experience.

CAREER OBJECTIVE

- To begin a career in IT support or network security, contribute to a technical team, and strengthen practical skills through supervised work, continuous learning, and responsible handling of systems and information.

EDUCATION

ISBAT University, Uganda: Bachelor's degree in Cyber Security — currently pursuing. Study areas include networking, cyber forensics, programming, computer fundamentals, and cybersecurity concepts.

The Academy St. Lawrence Buddo, Uganda: Secondary education — Class of 2024.

TECHNICAL SKILLS

IT Support and Operating Systems: Windows and Linux fundamentals, command-line navigation, file management, permissions, and basic troubleshooting.

Networking: TCP/IP, OSI model, IP addressing, subnetting, DNS/DHCP concepts, VLANs, routing fundamentals, and connectivity troubleshooting.

Cybersecurity Tools: Kali Linux, Nmap, Wireshark, Burp Suite, TheHarvester, and Google Hacking Database (GHDB); introductory reconnaissance and web security testing.

Programming and Development: Python and C fundamentals; HTML, CSS, and JavaScript fundamentals.

Technical Tools: Git and GitHub; virtual machine lab environments.

PROJECTS AND PRACTICAL EXPERIENCE

Mediroza Web Application Security Review — Internship Project

- Practised a structured review of a web application within an authorized learning project.
- Used Nmap and command-line tools to inspect accessible services and web ports.
- Reviewed HTTP response headers and basic web-server information, and explored Burp Suite traffic-inspection workflows.
- Documented testing steps and observations in a technical project report.

Burp Suite and Password Security Research

- Explored Burp Suite features and their use in authorized web application security testing.
- Studied authentication workflows, password security, and common password-testing approaches in a learning environment.
- Recorded research findings and learning outcomes for a cybersecurity portfolio.

Linux Administration and Networking Labs

- Practised filesystem navigation, file permissions, user administration, process management, search utilities, and archiving.
- Used virtualized lab environments and networking tools to study IP addressing and connectivity troubleshooting.

Cybersecurity Internship Learning Activities — Network Talks

- Completed project-based learning activities involving reconnaissance, security fundamentals, and technical reporting.
- Practised using TheHarvester and GHDB for security research and documented activities on GitHub.

CERTIFICATION AND TRAINING

Basics of Cyber Attacks & Threats: Short course — completed and passed. Issuing organization and completion date not provided.

ADDITIONAL PROJECT CONCEPTS

University Helper: Concept for a university productivity platform to organize timetables, assignments, notes, and academic tasks.

SkillBridge UG: Concept for a skills-development platform connecting learners with learning resources and employment opportunities.

PERSONAL STRENGTHS

- Problem-solving and logical thinking
- Willingness to learn and adapt to new technologies
- Technical research and documentation
- Responsible, security-conscious approach to practical learning

CAREER INTERESTS

- IT support and help desk

- Network security
- Security operations and vulnerability assessment
- Digital forensics and incident response
